4.9 Summary of Continuous monitoring in Bansbari and Bhuyanpara ranges and Ad hoc camera trapping in Panbari range

As we could not cover some areas up to our satisfaction during the stipulated period ,we kept a few camera traps operational for continuous monitoring in Bansbari and Bhuyanpara ranges of MNP from 24-03-2016 till 23-08-2016; we recorded 1 male that was not recorded earlier during the scheduled monitoring. We also recorded a new cub with in the continuous monitoring along with MNP_001_F, a female recorded during the scheduled monitoring. The western most range of MNP, Panbari could not be covered like last year in the schedule monitoring because of regular anti-insurgency operation . Therefoer, we did ad hoc camera trapping in the Panbari from 25-04-2016 to 01-06-2016 which yielded 3 individuals of tigers of which 1 was male and 2 were unknown (**Annexure-2**).

If we consider all these results, the Tiger population in Manas during 2016 is

| | |
|-------------------|-----------|
| MALES: | 6 |
| FEMALES WITH CUB: | 1 |
| OTHER FEMALES: | 6 |
| UNKNOWN SEX: | 2 |
| TOTAL ADULTS: | 15 |
| CUBS: | 1 |
| TOTAL DETECTED: | 16 |
